

ABOUT THE PROJECT

The project aims to establish service centers to assist citizens in accessing and utilizing the various online services provided by Government departments. These service centers are designed to make it easier for citizens to avail themselves of the 179+ online services offered by the Government.

The purpose of these service centers is to bridge the gap between the Government's digital services and citizens who may have limited access to technology, lack digital literacy, or prefer in-person assistance. By providing physical locations where citizens can receive guidance and support, the project aims to ensure that individuals can benefit from the Government's online services.

Overall, the project seeks to improve the delivery of Government services by ensuring that citizens can access and benefit from the wide range of online services offered by different Government departments. It aims to make the Government's digital platforms more inclusive, user-friendly, and accessible to citizens, thereby promoting efficiency, transparency, and convenience in interacting with the Government.
