

POLLUTION  
CONTROL  
CENTERS  
COMPUTERISATION

# ABOUT

# THE PROJECT

The online system is specifically developed for the Directorate of Transport to efficiently manage and oversee the Pollution Under Control (PUC) test centers across the state. The purpose of this system is to ensure that all PUC tests are conducted in accordance with the guidelines set by the Ministry of Road Transport and Highways (MoRTH).

The system allows the Directorate of Transport to have centralized control and monitoring capabilities. PUC test results are generated by the test centers and then securely stored on a central server. This centralized approach ensures uniformity, accuracy, and reliability of the test results.

By using this online system, the Directorate of Transport can effectively track and manage the PUC tests conducted across the state. They can monitor the performance and compliance of the PUC test centers, ensuring that they adhere to the established standards and guidelines.
